

Yale *Global Health Leadership Institute*

GHLI Fast Facts

- Established in 2009 by Faculty Director, Elizabeth H. Bradley, Ph.D., the Yale Global Health Leadership Institute (GHLI) creates and supports education and research programs to improve human health and health equity at Yale and around the globe.
- Through discovery, education and research, GHLI coordinates projects, convenes and builds relationships, and supports field-based programs. GHLI serves as a nexus for exchange, collaboration, and leadership development. Additionally, GHLI provides a platform to connect leaders around the world to support them meet global health goals.
- GHLI brings together researchers, practitioners, and policymakers to define new areas of research and help others achieve their vision for global health. Key areas of work include:
 - Early childhood development;
 - Non-communicable disease prevention and treatment;
 - Health system strengthening;
 - Technology development; and
 - Mental health resilience and violence.
- In collaboration with international partners, GHLI develops and disseminates research focused on improving health outcomes and quality of care in diverse setting and identifying their organizational, environmental and socioeconomic determinants.
- GHLI leads education programs not only on the Yale campus but around the world. In Ethiopia, GHLI pioneered the first Masters of Hospital and Healthcare Administration degree program in Africa. Since the MHA launch in 2008, more than 120 health care professionals at four universities have been trained, resulting in significant hospital improvements.
- GHLI team members are engaged in projects around the world, including Ethiopia, Liberia, Rwanda, Uganda, the United Kingdom, Cambodia, South Africa and the Eastern Caribbean.
