SAFER MATERNAL CARE

- 50% increased partograph completion rates from 11% to 61%
- 34% increased corticosteroids administered to mothers at risk of premature delivery from 26% to 60%

INFECTION CONTROL

- Hospital Acquired Infections: Decreased from 6.4% to 4.2%
- Catheter-Related Infections: Decreased from 32% to 14%
- Hand Hygiene Compliance: Almost tripled from 25% to 60%

EFFICIENT LEADERSHIP

- 92% of student capstone projects were published in peer-reviewed scientific literature.

LENGTH OF STAY

- Student led projects have also reduced length of stay from 15.3 days to 7.4 days.
- These efforts created significant changes in hospitals throughout Rwanda, leading to more efficient, effective care for patients and overall hospital management.
